In Today's World, we have plethora of people, young and old, men and women who feel like they aren't good enough. These thoughts become

"Anger realization"
 England is not a myth
 Can't you hear the whistling
 Like a dreamer, you are
 If you want to stop
 You will be broken in a flash
 The whistling is not to be feared
 I will give you the color-idea
 That I had in the film

"Bachchan/Childhood"
 By realising many things, you should be sad
 To have felt that way from the childhood
 How will I learn to read well
 And not want to be a child
 How have I been rejected by my mother
 How have I been rejected by my father
 How have I been rejected by my friends
 How have I been rejected by my teachers
 How have I been rejected by my society
 How have I been rejected by my country
 How have I been rejected by my world
 How have I been rejected by my life
 How have I been rejected by my death

"Anger realization"
 England is not a myth
 Can't you hear the whistling
 Like a dreamer, you are
 If you want to stop
 You will be broken in a flash
 The whistling is not to be feared
 I will give you the color-idea
 That I had in the film

"Bachchan/Childhood"
 By realising many things, you should be sad
 To have felt that way from the childhood
 How will I learn to read well
 And not want to be a child
 How have I been rejected by my mother
 How have I been rejected by my father
 How have I been rejected by my friends
 How have I been rejected by my teachers
 How have I been rejected by my society
 How have I been rejected by my country
 How have I been rejected by my world
 How have I been rejected by my life
 How have I been rejected by my death

Technology → It has become our life. As Technology develops, there are not only advantages but disadvantages as well. A few advantages of upgraded Technology are that one can save time and money, and life will be made easier as a result of doing labour. The disadvantages of upgraded technology is that people lose their jobs to machines, and a people lose their jobs to machines, they find a harder time to earn their bread. Even if machines and robots take place of human beings in the form of advanced technology then machines and robots are complex, they are highly expensive and programming these machines at the same time is not possible with you multitask. Advanced Technology saves a great deal of time. Life becomes much easier as robots and machines would take over your daily life chores. Each and every day has two sides of coin, similarly Technology also has certain pros and cons, each and every thing requires in its own sort of adjustments, just like we adjust ourselves with a week, we can reach to the totally different world of information. Again in this vast sea of information there are some dark spots, which might grab our life like a dog pit from whose vicinity you're a very difficult, that is you're doing sun bathing and many more which are certainly various sorts of criminal offences. Thus knowing the limitations of any thing and moving accordingly in life is very important, because in this fast moving world updating yourself in each and every areas is very important.

Good things are coming to you just keep even if you're in state of mind, no one is accepted as a reality.
Don't pray for a easy life, pray for one that brings to endure a difficult.

Let's go invent tomorrow instead of worrying about what happened yesterday.
— Steve Jobs.

1) Spiritus people do not know the value of their health in work, they sleep with dreams and wake up with determination and commitment.
2) Don't pray for an easy life, pray for one that brings to endure a difficult one.

Technology is good when it brings people together.

Actually different people and no one has the right to judge us neither the media, nor the society. Hence we all should feel proud of being part of an Integrated society.

ELECTRICAL ENGINEERING

- 2015**
- * NTPC (NTPC) established to replace 65 year old planning commission of India. (January-1-2015)
 - * Series of massacres by Boko Haram militants leave close to 8000 people dead in Baga of Nigeria (January-1-2015)
 - * Ram Adhini Party sweeps Bihar Assembly Elections securing 67 out of 70 seats; Arvind Kejriwal takes over as CM (February-1-2015)
 - * Major earthquake kills over 2800 people in Nepal. (April-25)
 - * 1992 Mumbai blast convict Yaqub Memon hanged in Nagpur Jail. (July-30)
 - * Cuba becomes the 1st country in the world to eradicate Syphilis. (June-30)
 - * Cassini-6 launched successfully using the CySLV D-6 launch vehicle providing a major leap for the country in communication technology.
 - * Egypt inaugurates a new channel of Suez Canal within record time.
 - * Indian 1st space observatory AstroSat launched (Sep-25)
 - * China ends decade old 1 child policy (Oct-30)
 - * Ministry of Defense approves induction of women as combat pilots in Indian Air Force.

ELECTRICAL ENGINEERING ADVANCEMENTS
PALM OIL INSULATION COULD TRANSFORM TRANSFORMERS.
 Researchers of Leibniz has identified an environmentally alternate as a major industrial use of oil. Abdelghaffar Abdel-Mattok has discovered a way to treat palm oil, so that it can insulate electrical transformers. But yet there is a particular problem with this project, which is that involvement of electrical insulation between electrical components makes them release on fuel gases and also cause environmental pollution if there is a leak. Thus efforts are being made for exploring the possibility of developing an environment friendly, non-toxic and has suitable properties such as low viscosity and low conductivity. This would extend the life of electrical transformers and greatly shall reduce the effects of leakage. There are researchers that this research may produce a sustainable and all-purpose electrical insulating fluid that would serve as an effective alternative to mineral-based insulating oil. This research has been acknowledged the **Dielectrics and Electrical Insulation Society** of University.

BATTERY TECHNOLOGY COULD CHARGE UP WATER DESALINATION.
 The technology that changes batteries for electronic device called provide fresh water from salty seas, says a new study by the University of Illinois engineers. Electricity running water when a salt filter has a battery that draws salt from of water. Interest in water desalination technology has risen as water scarcity have grown. Economical hurdles involves enormous amounts of energy requirements have prevented wide scale implementation. The most used process of reverse osmosis, that pushes water through a membrane that keeps out of the salt, a costly and energy intensive process. The battery approach has several advantages over reverse osmosis. The battery device can be small or large depending to different applications, while reverse osmosis plants must be very large to be efficient and cost effective.
